## PLACE THIS TAG ON YOUR MAIN WATER SHUT-OFF VALVE

WaterSense PARTNER
magine that the dot inside these brackets [ $\bullet$ ] is the only hole in your
tracking down. But that hole can waste more than 4,000 gallons of fresh
water each month - enough water to take a shower every day for more than half a year!
Consider how important water is for our families, pets and environment, and you see that even tiny holes deserve immediate attention. That's why we developed this simple water leak detection kit. It's designed to help you
find and repair water leaks - even the tiny ones.

GETTING READY
Use the checklists on the following pages to help direct your search for
some fairly common - and a few not-so-common - water leaks.
How can you be sure your inspection will be as thorough as possible? The checklists cover three areas: common indoor leaks, not-so-common indoo order shown, you'll uncover the greatest potential for savings in the first few places you look. It's a good idea to have the following items with you as you egin your wor

## SPOT YOUR SHUT-OFF VALVE NOW

Your main shut-off valve controls all of the water coming into your house. Everyone in your home should know the location of this valve, and how to turn it off. In case of an emergency such as a burst pipe, fast action could prevent costly damage from flooding.

## you don't know where this valve

 s located, it's important that you ind out. Normally, it's near the water meter. If your meter is outside thehouse, find the place where the house, find the place where the
water service line enters the ing. The shut-off valve is likely to be close by. Common locations are in the basement, under the kitchen sink, near the meter box or at the pressure regulator (if required). We have included an identification tag
o cut out and place on your main shut-off valve. (See flap on left).
After finding the valve, turn it to
After finding the valve, turn it to valves are generally closed by
urning the handle clockwise. If valve does not turn easily, do not force it or it might break. Rather, you may want to have the valve repaired so that it will work when you need it. NOW YOU'RE READY TO BEGIN!
When opening the valve to turn the water back on, open it fully, then close it just a quarter of a turn to make closing the valve easier the every water fixture shut-off check every water fixture shut-off valve ing the main and individual valves annually.
 stewardship and the responsible management of our precious natural resources. By using this leak detection kit to identify and repair water leaks, you can help make a difference in your monthly bill while conserving water.

## COMMON INDOOR LEAKS

the leaky toilet
Toilet flushes make up about 25 percent of the average household use. Accounting for the majority of
indoor water waste, toilet leaks are often caused by worn or damaged parts in the toilet flush tank. Some of these leaks will empty directly into the sewer line without leaving any clues. Even so, you can check for these leaks. Common causes include
Float arm problems
Remove the lid from the top of the flush tank. See if the overflow pipe and the plunger ball are working watching the tank mechanism and listening. You should hear the water listening. You
flow shut off.
If the water does not shut off, check the water level. If it has risen above the overflow pipe, gently bend the loat arm down and flush again. You may need to replace the plunger
ball if the water level is about one ball if the water level is about one nch below the top of the overflow pe and you still hear water flowing A tiny pinhole

 washer on the inlet line.
pipe. If you see running water, you
have a leak that should be reaired. should be repaired
Defective plunger ball (flapper valve) This is often a silent leak which causes the tank to continually drai improperly seated plunger ball (flapper valve) by dropping one of the dye-tracing tablets (included with this kit), or a few drops of food coloring,
into the teilet tank into the toilet tank. Do not flush. If a leak exists, the dye-colored wate
will seep into the bowl in about five will seep into the bow in about five
minutes. If it does, the plunger ball (flapper valve) may need to be replaced or realigned.

A slow drip can waste as much as
20 gallons of water each day.
THE LEAKY FAUCET

## A dripping faucet

A slow drip can waste as much as 20 gallons of water each day. A mere of water each day. With that much water - and money - going down the drain, it's important to get leaky faucets fixed as soon as possible.
If you notice that a faucet is dripping, first try closing it tightly. If it continues to drip, the most likely cause is a worn or wrong-size seat washer (also
called a stem washer). With just called a stem washer). Weth jus

## Refrigerator ice-making unit

 cleake in the ice-making unit will cause excessive ice accumulation small puddles of mater ander the refrigerator. You may want to call your refrigerator repair service.
## Bathtubs \& showers

Check the spout and shower head for dripping water. New washers handles. You may be able to do this repair yourself by unscrewing the faucet and replacing the washer with

one of the same size. Before doing this repair, close your home's main shut-off valve

## OUTDOOR LEAKS

When checking for water leaks, many people forget that water faucets and equipment exist outside as well as inside the home. Here are four areas you shouldn't overlook.

## Water faucets

Each faucet should be checked for leaks. Make sure faucets are closed when not in use. If you find a leaky
faucet, change the washer (after faucet, change the washer
closing the shut-off valve).
In colder climates, during the winter, these inside shut-off valves should be closed to prevent freeze-ups. Be sure to open the outside faucet
after you have shut the inside valve so that any water still in the pipes will drain out. These shut-off valves are usually in your basement. One shut-off valve may control all the
outdoor faucets.

Automatic lawn-sprinkling system Soft spots on your lawn may indicate a leak that is being absorbed int the ground.

## Swimming pool

he pool system's automatic shut-off valve could be malfunctiong., causing a continuous cycle of drained out. If the water level stay drained out. If the water level stays higher than normal, or the pool your automatic shut-off valve may need some attention.

## Service connecting line

If you find a soft, wet spot on your lawn or hear running water outside the service you may have a leak in soaks into the ground, cause. Wate soft spots. Close the main shut-off valve. If the sound of running water ontinues, the outside service could be leaking.

## YOU'VE CHECKED EVERYTHING... NOW WHAT?

If you haven't found a leak after checking all of the water outlets mentioned, and you still suspect a problem, you may want to call in a licensed plumber. representative for assistance. We'll work as hard as possible to help you
